

How is energy storage transforming the energy sector?

Energy storage is transforming the energy sector through its ability to support renewable energy and reduce grid reliance on carbon-intensive resources.

When will energy storage projects be regulated?

The storage industry anticipates this to be passed into law in 2022, and that it will apply to projects that achieved commercial operation after December 31, 2020, reducing the risks and uncertainty in energy storage project economics.

How much energy does a building use?

In the United States, buildings consume approximately 39% of all primary energy and 74% of all electricity. Thermal end uses--such as space conditioning, water heating, and refrigeration--represent approximately 50% of building energy demand and are projected to increase in the years ahead.

Can thermal energy storage be used in buildings?

Through industry partnerships, NREL researchers address technical barriers to deployment and widespread adoption of thermal energy storage in buildings. In the United States, buildings consume approximately 39% of all primary energy and 74% of all electricity.
