How many AE can a density energy cell store?

The Energy Cell can store 200k AE, and just one should be sufficient for most use cases, handling the power surges of normal network use with ease. The Dense Energy Cell can store 1.6M AE and is for when you want to run a network off of stored power, or handle the massive instantaneous energy draw of large spatial storage setups.

Why are Nei and AE2 not working properly?

So for some reason both NEI and AE2 are presumably not moving things into the crafting grid properly. Yes, the energy containing crap of Ic2 (battery, crystals) do not agree very well with the AE crafting system. As a workaround, you can use the crafting machine from thermal expansion (cyclic assembler I think).

How do I generate AE2 energy?

It can also be generated by Vibration Chambers or passively using a Crystal Resonance Generator, but AE2 is designed to be used with other tech mods that have better energy generation. All this means that it's best to consider an AE2 network as a single large multiblock machine when laying out your base's energy distribution infrastructure.

Why are my items not coming to AE2?

The problem was that the items weren't arriving at the AE2 interface because of the JEI + autocomplete thing. You must log in or register to reply here.

Does AE2 use forge energy?

AE2 does not use Forge Energy (on Forge) or TechReborn Energy (on Fabric) internally. Instead it converts them to its own unit, AE. This conversion is one-way. Energy can be converted by Energy Acceptors and ME Controllers, though controller faces are better used for more channels.
