Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).

Where a profitable application of energy storage requires saving of costs or deferral of investments, direct mechanisms, such as subsidies and rebates, will be effective. For applications dependent on price arbitrage, the existence and access to variable market prices are essential.

Does storage capacity improve investment conditions?

Recent deployments of storage capacity confirm the trend for improved investment conditions (U.S. Department of Energy, 2020). For instance, the Imperial Irrigation District in El Centro, California, installed 30 MW of battery storage for Frequency containment, Schedule flexibility, and Black start energy in 2017.

What is a revenue stream parameter?
