How much energy does Slovakia use?

Primary energy use in Slovakia was 194 TWh and 36 TWh per million inhabitants in 2009. Slovakia has a plan to get renewable sources of energy up to 19.2% by 2030. From 2024, following the completion of two new nuclear reactors, Slovakia will return to being a net exporter of electricity. Slovnaft is the largest oil refinery in Slovakia.

How long will a gas storage facility last in Slovakia?

Its construction should last about one year. The current underground gas storage capacity in Slovakia is about 3 billion cubic metres. The existing facilities are operated by companies Nafta and Pozagas. Another locality suitable for construction of a gas storage facility is in Ptruksa in eastern Slovakia.

Why does Slovakia use nuclear power?

Nuclear power plays a pivotal role, contributing significantly to the country's electricity generation. This reliance on nuclear energy aligns Slovakia with some of the most advanced energy strategies in Europe. The country also utilizes conventional sources such as coal and natural gas, though in lesser proportions compared to nuclear power.

Why is integration important for Slovakia's energy strategy?

This integration enhances energy security and market efficiency, not just for Slovakia but for the European Union as a whole. Interconnectivity with neighboring countries, such as Hungary, Czech Republic, and Austria, is a significant aspect of Slovakia's energy strategy.
