

# Average nickel manganese cobalt battery price per 30kWh in Greece

How much does a lithium nickel cobalt battery cost?

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour(kWh),while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions,increasing the battery's energy density and allowing for longer range.

How much does a battery cost?

This specific composition is pivotal in establishing the battery's capacity, power, safety, lifespan, cost, and overall performance. Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh.

How much does cobalt cost in 2022?

For example,the price of cobalt has fallen from roughly \$70,000 per metric tonin 2022 to about \$30,000 in 2024. Similarly,the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Are NCM batteries a good choice for EVs?

This cost advantage makes them a favorable choicefor standard- or short-range EVs. In the rapidly evolving EV battery market,specific compositions have taken center stage. In 2021,NCM batteries commanded 58% of the market share,closely followed by LFP and NCA,each holding a 21% share.

Why are cobalt prices consolidated?

In the weeks following confirmation that the cobalt market will face an additional three months of no exports from the Democratic Republic of Congo (DRC),metal prices have consolidated as participants point to the future for bullish sentiment.

The purpose of using Ni-rich NMC as cathode battery material is to replace the cobalt content with Nickel to further reduce the cost and improve battery capacity.
