

Do you need to puncture aerosol cans?

Keep in mind that puncturing your aerosol cans is not required. If you decide that this strategy will help you manage waste more efficiently, be sure to follow the recommendations to properly store, manage, and dispose of hazardous waste aerosol cans and their contents.

Can aerosol cans be recycled?

Properly punctured and drained aerosol cans may be recycled as scrap metal. As for the contents drained from the can--the generator must make a hazardous waste determination and manage the waste accordingly under RCRA. To manage aerosol cans this way, handlers must follow seven key requirements.

Are aerosol cans hazardous waste?

The product may itself have hazardous qualities--like hairspray, deodorant, or other flammable products. Aerosol cans can also be regulated as hazardous waste because of the propellant used to make the can spray. [VIDEO] Final Rule Alert: Aerosol Cans as Universal Waste

How long do you have to manage aerosols as hazardous waste?

Until then, or unless your state has its own similar program, you must manage aerosols as hazardous waste and follow the applicable 90 day, 180 day, or satellite requirements. EPA has more information on state adoption of Federal universal waste criteria and state universal waste programs on its website.

What is a waste aerosol?

A waste aerosol is an aerosol container that will no longer be used for its intended purpose. Defective aerosols that are not used but instead returned new to the manufacturer or distributor are not considered wastes in Minnesota.

When is an aerosol can considered empty?

Note An aerosol can is considered "empty" when it is "emptied of the contents and propellant to the maximum extent practical under normal use (i.e., the spray mechanism was not defective and thus allowed discharge of the contents and propellant)." [Cal. Code Regs., tit. 22, § 66261.7 (m)]
