

# Disassembly of the energy storage power station structure

What is a disassembly station?

The disassembly station offers the opportunity for laboratory-scale investigations of automated cell disassembly, yielding results that can be employed to evaluate the feasibility of transferring the technology to an industry-scale application. 3.4. Experimental validation

Can a disassembly station be adapted for cells with hard casings?

Thus, experimental investigations in automated cell disassembly within the station can be executed to verify the disassembly concept and make adjustments to the construction. With this modular design, an adaptation of the disassembly station is feasible for cells with hard casings by quickly replacing the cell opening unit.

What is a prototype disassembly station?

Guided by this concept, a prototype disassembly station (Fig. 6) for spent battery cells is conceptualized within a glovebox filled with extreme dry inert gas, comprising different units with an emphasis on cell opening and ESCs dismantling of z-folded pouch cell.

How can automated battery disassembly process chains be developed?

This research focuses on conceptualizing a framework for developing automated battery disassembly process chains. Utilizing computed tomography (CT) scans, internal cell structures and joints are identified, contributing to the development of disassembly procedures.

How is automated disassembly performed?

Utilizing computed tomography (CT) scans, internal cell structures and joints are identified, contributing to the development of disassembly procedures. Through post-mortem analysis, cells are manually disassembled and the processes are evaluated, facilitating the establishment of the framework for automated disassembly.

How did the manual cell disassembly proceed?

In summary, the manual cell disassembly proceeded overall smoothly, as the major structures and joints have been identified by CT scans. Apart from the CT scans, the post-mortem analyses provide supplemented detailed information regarding the internal cell structures and joints.
