

What is the minimum crimp tensile requirement?

1/ Wire shall not be pulled to a force in excess of 80 percent of the specified minimum crimp tensile requirement. This requirement shall be met to avoid damage to the wire/contact crimp joint. 2/ These forces are based on wire size AWG 24. If smaller wire is used these values should be adjusted accordingly. Figure 13-1. Typical Push Test Tool

What is the minimum insulation clearance for crimped connections?

Crimped Connections. The minimum insulation clearance for all crimped connections shall be 0.25mm(0.01in.). The maximum insulation clearance for conductors 20AWG and smaller shall be 0.75mm (0.03in.). The maximum insulation clearance for conductors 18AWG and larger shall be 1.25mm (0.05in.).

How much bare wire can be crimped in a crimp barrel?

Insulation terminates 0.010 in. minimum from contact crimp barrel. Amount of exposed bare wire between the insulation and the contact crimp barrel does not exceed 0.03 inch maximum for No. 20 AWG wire and smaller, and 0.05 inch maximum for No. 18 AWG wire and larger. Care should be taken when seating contacts in the crimping tool.

Can stranded wire be used for crimping?

Para 4.3 No. 4: Change sentence to "Crimping. Stranded wire shall be used for crimping. Crimping of solid wire is prohibited. Crimping of solder tinned stranded wire is prohibited." Para 5.7: Change address for training center to: GSFC, Training Center, Code 300.1, 7000 Columbia Gateway Dr., Columbia, MD. 21046

What is the tensile strength of a crimp test?

13.7.5 The tensile strength of the crimp test sample connections shall be in accordance with Table 13-1. 13.7.6 For those crimped ring conductor(s) combinations not contained in Table 13-1, the tensile strength of the crimp connection shall be no less than 60 percent of the tensile strength of the wire.

What are the inspection criteria for crimp ferrules?

Inspection criteria specified by the crimp ferrule manufacturer shall be applied. The contact shall be deformed only by tool indenters. Crimp tool indenters shall be symmetrical and centered on the crimp barrel. There shall be no exposed base metal or other damage.
