

How do we integrate storage sharing into the design phase of energy systems?

We adopt a cooperative game approach to incorporate storage sharing into the design phase of energy systems. To ensure a fair distribution of cooperative benefits, we introduce a benefit allocation mechanism based on contributions to energy storage sharing.

Does shared energy storage sharing provide a fair distribution of benefits?

To ensure a fair distribution of cooperative benefits, we introduce a benefit allocation mechanism based on contributions to energy storage sharing. Utilizing realistic data from three buildings, our simulations demonstrate that the shared storage mechanism creates a win-win situation for all participants.

How a shared energy storage system works?

A two-stage model describing the storage sharing among stakeholders is developed. Storage sharing contribution rate is defined to inspire stakeholders to join share. An incentive mechanism is designed based on the asymmetric Nash bargaining model. Shared energy storage system ensures the economic feasibility of all participants.

What is energy storage sharing framework?

(1) A new energy storage sharing framework is proposed to provide strategies for both storage capacity allocation and power capacity allocation. Compared with the introduction of a new allocation method of power capacity provides a more feasible way for energy storage sharing considering the limited power capacity.

Why is storage sharing important in energy systems?

By incorporating storage sharing into the design phase of energy systems, we can achieve a more balanced and efficient distribution of storage capacity. This leads to a reduction in energy waste and improves the overall performance of the energy system.

How to coordinate energy sharing strategies?

The auction-based model is another promising method to coordinate energy sharing strategies. For example, a periodically organized auction mechanism is designed to share storage resources by assigning physical storage rights to multiple participants.
