Are energy storage codes & standards needed?

Discussions with industry professionals indicate a significant need for standards..." [1,p. 30]. Under this strategic driver,a portion of DOE-funded energy storage research and development (R&D) is directed to actively work with industry to fill energy storage Codes &Standards (C&S) gaps.

What are the fire and building codes for energy storage systems?

However, many designers and installers, especially those new to energy storage systems, are unfamiliar with the fire and building codes pertaining to battery installations. Another code-making body is the National Fire Protection Association (NFPA). Some states adopt the NFPA 1 Fire Code rather than the IFC.

Does industry need energy storage standards?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

What are fire codes & standards?

Fire codes and standards inform energy storage system design and installationand serve as a backstop to protect homes,families,commercial facilities,and personnel,including our solar-plus-storage businesses. It is crucial to understand which codes and standards apply to any given project,as well as why they were put in place to begin with.

What is an energy storage system (ESS)?

Covers an energy storage system (ESS) that is intended to receive and store energy in some formso that the ESS can provide electrical energy to loads or to the local/area electric power system (EPS) when needed. Electrochemical,chemical,mechanical,and thermal ESS are covered by this Standard.

Why are building and fire codes important?

Before diving into the specifics of energy storage system (ESS) fire codes, it is crucial to understand why building and fire codes are so relevant to the success of our industry. The solar industry is experiencing a steady and significant increase in interest in energy storage systems and their deployment.
