

How to write an energy storage station project transfer agreement

What is an energy storage tolling agreement?

Under an energy storage tolling agreement, the developer of the energy storage system is responsible for obtaining site control, permits, interconnection rights, equipment, and construction contracts, as well as achieving agreed-upon milestones such as a target commercial operation date and a guaranteed commercial operation date.

Do energy storage tolling agreements restrict a developer's use of a battery?

As the energy stored in the battery belongs to the buyer, energy storage tolling agreements will often prohibit or restrict the developer's use of the storage system for station service. The inclusion of this condition requires that the developer enters into a retail service contract for the system's non-storage load.

Who pays for energy storage & ancillary services?

The buyer--often the utility company--pays for the electricity used to charge the energy storage system, and receives the right to charge/discharge the system for energy and ancillary services.

One agreement can help organizations meet up to 100% of their decarbonization needs. As an experienced renewable energy project developer and solutions provider, Enel North America ...

Any transaction or combination of transactions between or among Affiliates of Seller, including any corporate reorganization, merger, combination or similar transaction or transfer of assets or ...
