

# Legal risks of automotive battery energy storage

What happens if you don't comply with EV battery storage regulations?

Non-compliance risks financial penalties, legal issues, and reputational damage. James Group understands how important it is for OEM, tier 1 suppliers, and other lithium-ion battery manufacturers and suppliers to follow EV battery storage safety rules and regulations.

Will battery storage continue to be controversial in the near-term?

While battery storage is likely to continue to remain controversial in the near term, these actions demonstrate State leadership's commitment to continued progress towards clean energy transition goals, including battery storage.

Why do we need batteries for electric vehicles?

Batteries for electric vehicles (EVs) are essential for the clean energy transition in road transport. Increasing the uptake of EVs requires accessible and affordable charging infrastructure as well as reinforced electricity networks. It needs increased focus on affordable EV models that require smaller batteries.

How can regulators unlock the full potential of battery storage?

To unlock the full potential of battery storage, policy makers and regulators need to ensure that regulatory systems recognise the full value of the services that it offers, enable market access and establish price signals that accurately reflect its various contributions.

Should batteries be aggregated into virtual power plants?

Where feasible, they should also allow the aggregation of behind-the-meter batteries into virtual power plants that can offer services akin to utility-scale projects. Growing demand for critical minerals for batteries puts a focus on creating secure, resilient and sustainable supply chains.

As we explained, that bill, proposed as an urgency statute, would significantly curtail the authority of both local agencies and the California Energy Commission (CEC) to site new energy...

As the US produces more lithium-ion batteries that power electric vehicles, the extent of the chemical dangers to American workers is just beginning to come into focus.

A legal review of on-site battery storage agreements focuses on contract duration, payment structures, and risk allocation to ensure operational and financial clarity. It assesses liability ...

Cybersecurity is essential for BMS A BMS (Battery Management System) is the main system of any energy storage system. It is responsible for various critical functions such as battery health ...

## Legal risks of automotive battery energy storage

The report notes that Infyos' analysis of thousands of data sources reveals that many of the largest automotive, energy storage and other industry firms use lithium-ion batteries that could have exposure to human ...

Up to three quarters of the global lithium-ion battery supply chain is at risk of exposure to human rights abuses, such as forced labour and child labour AI supply chain risk platform Infyos analysed thousands of data ...

In the past few months, Gard has received several queries on the safe carriage of battery energy storage systems (BESS) on ships. In this insight, we highlight some of the key risks, regulatory requirements, and recommendations for ...

Use this tool to search for policies and incentives related to batteries developed for electric vehicles and stationary energy storage. Find information related to electric vehicle or energy storage financing for battery development, including ...

Up to three quarters of the global lithium-ion battery supply chain is at risk of exposure to human rights abuses, such as forced labour and child labour AI supply chain risk ...

Battery energy storage systems (BESS) are an essential component of California's leading energy transition strategy, enabling the state to integrate renewable energy production, stabilize the grid and ensure a reliable energy ...

Grid-scale battery energy storage systems (BESS) enable us to use electricity more flexibly and decarbonise the energy system in a cost-effective way. [footnote 31] As the technology and ...

Operational requirements are common in energy storage warranties. Even with significant improvements in cell and system technology alongside cost reductions, warranty terms have become more complex. Car manufacturers are able to ...

Apart from Li-ion battery chemistry, there are several potential chemistries that can be used for stationary grid energy storage applications. A discussion on the chemistry and potential risks ...

Battery energy storage systems (BESS) are using renewable energy to power more homes and businesses than ever before. If installed incorrectly or not safely commissioned, they pose ...

Two major areas of international trade that will remain causes of concern for energy storage projects are the application of tariffs and supply chain integrity. While it remains to be seen what the US administration might impose ...

SEPA also recognises that there are potential environmental impacts associated with Battery Energy Storage

Systems (BESS). We will continue to work with planning authorities through ...
