

Will energy storage grow in 2023?

Global energy storage's record additions in 2023 will be followed by a 27% compound annual growth rate to 2030,with annual additions reaching 110GW/372GWh,or 2.6 times expected 2023 gigawatt installations. Targets and subsidies are translating into project development and power market reforms that favor energy storage.

Why is energy storage important?

To achieve New York's climate goals, it's clear energy storage will play an important role in the electric grid & transportation system of the future. We work to ensure that markets are developed fairly & with an eye towards enabling a clean energy future. Discover more about our history, mission, leadership, and more.

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.

While naturally focusing on battery storage, we also cover the variety of competing storage technologies and describe the wide variety of problems energy storage seeks to solve, at a ...

NY-BEST is hosting our Annual Fall Energy Storage Technology and Innovation Conference on Wednesday, October 29, 2025, at the Ithaca Downtown Convention Center in Ithaca, NY. This ...
