How much does an off-grid PV system cost?

For the off-grid PV systems, the price currently ranges between 2400 and 2650 US\$/kWp. These values include all costs of components and of installing the PV power plant. Figure 9: Historical price experience curve of PV modules since 1980.

How are power plant investment costs determined in Egypt?

The investment costs are determined based on market research on currently installed power plants in Egypt while considering external market studies at the same time. Inside the technologies, the system costs are distinguished based on power plant size and power plant configuration.

How much does a storage system cost a wind power plant?

Adding a storage system increases the cost of the plant reaching a range from 4600 US\$/kWh up to 5850 US\$/kWh (FRENELL 2016). Wind Power Plants market Development and Forecast

How much will solar power cost in 2035?

In 2035 PV can reach LCOE of 0.049 US\$/kWh for rooftop plants and even 0.042 US\$/kWh for ground mounted PV systems. These costs will be lower than both CCGT and diesel generators. Over the long-term, PV plants in Egypt and wind power at onshore locations with favorable wind conditions have the lowest LCOE.

How much LCoE can be achieved with solar irradiation?

In regions with higher solar irradiation of up to 2500 kWh/(m<sup>2</sup>·a), such as in Upper Egypt (Aswan), and Marsa Alam, LCOE of 0.118 US\$/kWh can be achieved for CSP technologies without thermal storage and 0.137 US\$/kWh for technologies with thermal storage. Version: December 2016
