How do you empty a generator tank?

First up, you'll need to empty the tank: For Champion generators: Open the drain screw and turn on the fuel valve to let the gas flow into a safe container. Other generators: Check your manual for how to drain fuel specific to your model. 2. Disconnect hoses and lines Next, remove any hoses hooked up to the tank:

How do you fix a rusty fuel tank?

If your tank's rusty but not too far gone, you might be able to clean it up: Use hot water and a degreaser to get rid of fuel gunk. Apply a rust remover like Evapo-Rust to tackle the corrosion. Make sure the tank's totally dry before you put it back to avoid new rust. A clogged fuel cap vent can mess with your generator's performance:

How do you remove a fuel tank from a mep-802a?

Take off the top yellow cover to get to the fuel tank. Use a 7 mm socket to remove the bolts holding the tank. Put everything back the same way you found it, making sure all parts are in the right spot. For MEP-802A models, it's a bit more involved: You might need to remove the radiator and its support to reach the tank.
