

Are proxy storage PPAs the future of battery storage?

Such threshold prices overlap with the best-case forecast of the battery levelized cost of storage in 2030, indicating that proxy storage PPAs can play a role in enabling battery storage installations within the next ten years in Europe (generating about EUR180 million per year).

What is the future role of proxy storage PPAs?

Projections are considered for renewable energy generation and for electricity market prices to assess the future revenues of proxy storage PPAs and their uncertainty. This determines the future role of proxy storage PPAs in light of decreasing cost of energy storage.

What is a proxy storage power purchase agreement (PPA)?

We propose a contractual setup, the proxy storage power purchase agreement (PPA), to foster the deployment of energy storage technologies. We define a threshold price below which the PPA becomes financially attractive for PPA buyers. We compute the threshold price for several storage technologies and configurations, in seven European countries.

What are the cash flows of proxy storage PPAs?

From the energy buyer perspective, the cash flows of proxy storage PPAs are based on the revenues of the optimal operation of a virtual energy storage technology (with predefined characteristics) on the day-ahead market.

What is a battery energy storage system?

2.1. Battery energy storage systems (BESS) Electrochemical methods, primarily using batteries and capacitors, can store electrical energy. Batteries are considered to be well-established energy storage technologies that include notable characteristics such as high energy densities and elevated voltages .

Are proxy storage PPAs based on perfect foresight?

On the other hand, the revenues of proxy storage PPAs are based on perfect foresight, hence it may not be achieved due to forecasting uncertainty in the day-ahead market (Zucker et al. estimate that around 80% of the revenues with perfect foresight can be harnessed (Joint Research Centre and Institute for Energy and Transport et al., 2013)).
