

Storage and testing standards for energy storage electromagnetic cores

What is the energy storage system test manual?

INTRODUCTION 1.1 Purpose The following Energy Storage System Test Manual is a series of detailed procedures developed by EPRI in concert with the Testing and Characterization Working Group of the Energy Storage Integration Council (ESIC). This manual addresses the performance and functional testing of energy storage systems (ESSs).

What if energy storage system and component standards are not identified?

Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

What is the basic testing and characterization of energy storage systems?

The Basic Testing and Characterization of Energy Storage Systems is intended to be storage- technology agnostic, encompassing all electricity -in, electricity -out energy storage technologies.

Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS).

What is the performance and functional testing of energy storage systems?

This manual addresses the performance and functional testing of energy storage systems (ESSs). The objective is to provide specific, detailed test procedures that are reproducible so that utilities and other testing entities can easily use them for the performance evaluation of energy storage systems. The key principles that guide this effort:

Should energy storage safety test information be disseminated?

Another long-term benefit of disseminating safety test information could be baselining minimum safety metrics related to gas evolution and related risk limits for creation of a pass/fail criteria for energy storage safety testing and certification processes, including UL 9540A.
