What is shared energy storage?

Shared energy storage involves multiple agents, objectives, and constraints. Its configuration and operation require careful coordination and decision-making, with attention to market dynamics, contract structuring, and revenue sharing .

What factors affect shared energy storage?

The model considers the concerns of stakeholders in shared energy storage, including investors, users, and power grid operators. Additionally, the impact of intricate factors, such as actual distribution network topology and power flow, is taken into consideration.

How to constrain the capacity power of distributed shared energy storage?

To constrain the capacity power of the distributed shared energy storage, the big-M method is employed by multiplying  $U_{e,s,i}^{pos}(t)$  by a sufficiently large integer  $M$ . (5)  $P_{e,s,i}^{min} U_{e,s,i}^{pos} \leq P_{e,s,i}^{max} \leq M U_{e,s,i}^{pos}$   $E_{e,s,i}^{min} U_{e,s,i}^{pos} \leq E_{e,s,i}^{max} \leq M U_{e,s,i}^{pos}$

Should energy storage devices be shared among multiple agents?

In summary, configuring and sharing an energy storage device among multiple agents, in consideration of their respective interests, can lead to more efficient utilization of the device. Moreover, such a setup can determine the most suitable configuration and operation mode under the influence of various factors.

Can shared community energy storage systems be used in residential areas?

A novel energy cooperation framework was proposed to operate and distribute profits from shared community energy storage systems in residential areas . Mediawaththe et al. conducted a study on SES-based demand side management in a neighborhood network, demonstrating the benefits for the SES provider, users, and electricity retailer .

Does energy storage provide a complementarity between load and power source?

This approach does not demonstrate the complementarity of the load and power source in different locations during the same time period, nor does it reflect the flexibility of the energy storage device. In the Case 2 analysis, energy storage serves solely to transfer load and avoid peak and valley tariffs at certain times.
