

# Where can singapore a developed country store electricity

Where does Singapore get its electricity from?

SINGAPORE: Where Singapore gets its electricity from has been in the headlines in recent months, with the announcement that the country will import electricity from Malaysia and the opening of the largest energy storage system in Southeast Asia on Jurong Island.

Why is Singapore importing energy?

The short answer is that Singapore lacks natural renewable energy sources, so importing energy allows it to access cleaner energy sources from abroad. Singapore's total electricity consumption has increased over the years. It went up by 5.3 per cent from 2020 to 2021, with all sectors seeing a growth in its electricity consumption.

How has Singapore's Energy story evolved over the years?

Over the years, Singapore's energy story has evolved in tandem with the growth of the country. 1. Singapore is progressively greening its energy mix. Singapore's energy mix has changed significantly over the decades. Fuel oil once powered our growth as a key trading hub until we switched to imported natural gas in the early 2000s.

Why is energy important in Singapore?

Energy in Singapore is critically influenced by its strategic position in maritime Southeast Asia, nestled between Malaysia and the Singapore Strait, near essential maritime routes like the Straits of Malacca and the South China Sea.

How has Singapore's energy sector changed over the past 50 years?

Singapore's energy sector has come a long way since its early days. Over the last 50 years, we have moved from oil to natural gas for cleaner power generation. We have also seen an increased use of solar energy, particularly on rooftops and reservoirs.

Is natural gas a good source of electricity in Singapore?

Natural gas is the backbone of Singapore's electricity supply, accounting for 95% of the total in 2021. Singapore adopted natural gas as the main energy source for power generation in the early 2000s. With limited renewable energy potential, natural gas provided a relatively clean, efficient electricity source compared to oil and coal.

Separately, Singapore has launched a 285 MWh Energy Storage System (ESS) on Jurong Island, the largest ESS in Southeast Asia. This allows Singapore to store energy to supply electricity ...
