

What is the revenue of wind-storage system?

The revenue of wind-storage system is composed of wind generation revenue, energy storage income and its cost. With the TOU price, the revenue of the wind-storage system is determined by the total generated electricity and energy storage performance.

How does energy storage work in a wind farm?

After energy storage is integrated into the wind farm, one part of the wind power generation is sold to the grid directly, and the other part is purchased and stored with a low price, and then is sold with a high price through the energy storage system.

How much does a wind-storage system cost?

The optimal storage capacity is 38MWh when the charging and discharging efficiencies are 95%, the energy storage cost is 150 \$/kWh. The total annual income is calculated as 13.23 million US dollars from the wind-storage coupled system.

What is battery storage for wind turbines?

Battery storage for wind turbines offers flexibility and can be easily scaled to meet the energy demands of residential and commercial applications alike. With fast response times, high round-trip efficiency, and the capability to discharge energy on demand, these systems ensure a reliable and consistent power supply.

Are energy storage systems a viable option for wind turbine installations?

Energy storage systems have been experiencing a decline in costs in recent years, making them increasingly cost-effective for wind turbine installations. As the prices of battery technologies and other storage components continue to decrease, energy storage systems become a more financially viable option.

How much money does a simulated wind-storage system make?

When the energy storage system lifetime is of 10 years, and the cost is equal to or more than 375 \$/kWh, the optimization configuration capacity is 0 MWh, which means no energy storage installation. The annual revenue of the simulated wind-storage system is 12.78 million dollars, which is purely from the sale of wind generation.
